Evidence Analysis:

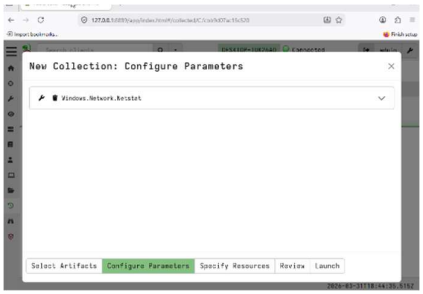
During the Analysis while analysing the findings from the Velociraptor hunt, I didn't find any malicious external connections.

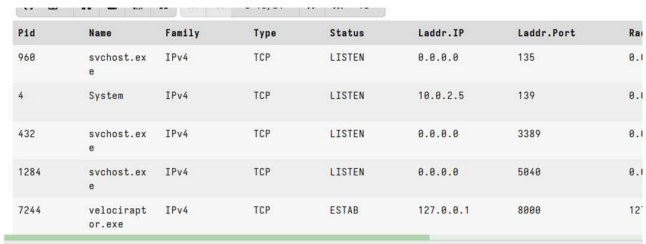
Item	Description	Collected By	Date	Hash Value
Network log	Velociraptor Netstat Export (Windows VM)	Himansh Purswani	2026-03-31	11347201A993E7588 97B0DC5BE62535929CD F02EA4B9DABADE95FAB8D93 58525

- There were total 5 active rows captured.
- No suspicious connections identified.
- Analysis of Active Ports:
- Port 3389 (RDP): Identified as LISTEN state. This is a known administrative port.
- Port 8000(velociraptor): it was identified as extablished to 127.0.0.1. This is a confirmed tool-related to traffic.

Wazuh:

No Event IDs such as 4625 Failed logon alerts were detected for the period of the analysis, confirming that the open RDP port(3389) has not been subjected to a successful or ongoing attack today.





Pid	Name	Family	Type	Status	Laddr.IP	Laddr.Port	Ra
