SOAR Playbook Development

50 Word Playbook summary:

This playbook orchestrates a rapid response to phishing incidents by integrating Splunk detection with automated containment. Upon triggering, it performs an IP reputation lookup via VirusTotal. Malicious IPs are immediately blocked using CrowdSec, while an incident case is generated in TheHive to ensure forensic accountability and SOC analyst oversight.

Playbook Step	Status	Notes
Check IP	Success	IP 192.168.1.102 queried via VT; flagged as malicious
Block IP	Success	CrowdSec decision added; IP blocked on host firewall.
Create Ticket	Success	Case generated in TheHive with full Audits
